

SWAPNIL DHAMAL

Python Engineer | SDET / QA Automation | Generative AI (Entry Level)

Pune, India | swapnildhamal7895@gmail.com | +91 8208331243 | linkedin.com/in/swapnil-dhamal-33b5b2220 | github.com/swapnil7895

PROFESSIONAL SUMMARY

Python Engineer and SDET with 4+ years of experience in test automation, CI/CD, and cloud-based quality engineering at Nutanix and Eviden. Experienced with AWS Lambda, AWS Batch, Amazon CloudWatch, and Snowflake for building and validating data-driven cloud workflows. Hands-on experience building Generative AI applications using OpenAI and Google Gemini APIs, with regular use of AI tools for debugging, test generation, and log analysis in daily engineering work. Seeking roles in Python and SDET automation engineering, or entry-level Generative AI / LLM application development.

TECHNICAL SKILLS

Generative AI / LLM: OpenAI API (GPT-4), Google Gemini API, Prompt Engineering, Chatbot Development, AI-assisted development workflows

Python & Testing: Python 3.x, Pytest, OOP and Design Patterns, REST API Testing, Selenium (Python and Java), Pandas

Cloud & Data: AWS Lambda, AWS Batch, AWS S3, Amazon CloudWatch, Snowflake, AWS CodeCommit

CI/CD & DevOps: Jenkins (Declarative and Scripted), Ansible, Ansible Tower, Nexus Repository, Shell Scripting, Linux

Tools & Databases: SQL, MySQL, JIRA, Git, CyberArk REST APIs, SyntBots (JBPM), HTML, CSS, JavaScript

WORK EXPERIENCE

Test Engineer - SDET / QA Automation | Nutanix (via Vigoursoft Pvt Ltd)

June 2025 - Present

- Design and develop Python-based automated test frameworks for the DataLens cloud data product, covering functional, regression, and integration testing.
- Use AWS Lambda, AWS Batch, and Amazon CloudWatch to support scalable test execution, monitoring, and automated test-data handling.
- Validate data pipelines and queries against Snowflake as part of backend and service-level test coverage.
- Integrate automated test suites into CI/CD pipelines for continuous quality validation and faster release feedback loops.
- Regularly use AI tools (ChatGPT / OpenAI API) for test case generation, log analysis, and debugging, improving triage efficiency.
- Manage defect tracking and sprint validation through JIRA; collaborate with development and DevOps teams to support shift-left testing.

Automation Developer / Associate Consultant | Eviden (formerly Atos Syntel)

Sep 2021 - Jun 2025

- Built scalable Python automation solutions for file processing, database operations, and API integrations, reducing manual effort by 50%.
- Designed a modular Python automation framework using OOP principles, improving reusability and maintainability across multiple projects.
- Built Pytest-based automated test suites achieving 90%+ test coverage for critical business workflows.
- Implemented password management automation using Python and CyberArk REST APIs for secure credential rotation across 100+ environments.
- Designed and maintained Jenkins CI/CD pipelines (Declarative and Scripted), reducing deployment time by 40%.
- Automated audit-related file operations across 100+ Linux and Windows servers using Python and Ansible, reducing audit preparation time by 60%.
- Managed source control and build artifacts using AWS CodeCommit and Nexus Repository.
- Developed and supported RPA bots using SyntBots (Java, Selenium, JBPM); trained and mentored junior team members on automation best practices.
- Received 3 Spot Awards and 1 Silver Accolades Award for high-impact automation delivery.

PROJECTS

Travel Reimbursement Approval Agent (Personal Project)

- Built an end-to-end agentic AI system that automates travel reimbursement claim approvals — taking employee claims as input, reasoning against company policy and receipt rules, and returning a structured approve/reject decision with justification.
- Designed the agentic reasoning loop using LangGraph (`create_react_agent`), enabling the AI agent to use tools, evaluate policy conditions, and make multi-step decisions autonomously.
- Integrated Google Gemini API as the LLM backend with multi-model fallback logic for reliability across different request scenarios.
- Built a FastAPI backend exposing REST endpoints for claim submission and decision retrieval, alongside an interactive chat-style web UI with light/dark mode support.
- Used Pydantic for strict input/output validation and implemented robust error handling, retry mechanisms, and regex-based JSON extraction for production-grade reliability.
- Supported two run modes — CLI batch processing and FastAPI interactive mode — demonstrating flexibility in deployment patterns.
- Technologies: Python, LangGraph, Google Gemini API, FastAPI, Pydantic
- GitHub: github.com/swapnil7895/travel-approval-agent

Conversational Chatbot - Q&A Application (Personal Project)

- Built a conversational chatbot integrating OpenAI (GPT-4) and Google Gemini APIs to answer user queries with context-aware responses.
- Applied prompt engineering techniques to control response quality, tone, and accuracy across different query types.
- Compared response behavior between OpenAI and Gemini models to evaluate trade-offs in quality, latency, and cost.
- Technologies: Python, OpenAI API, Google Gemini API

Job Application Automation Tool (Personal Project)

- Built a Python automation tool using Selenium to streamline job searching and applications on LinkedIn and Naukri.
- Integrated the Google AI API to generate and tailor application content (e.g., personalized messages or summaries) as part of the workflow.
- Technologies: Python, Selenium, Google AI API

Agri Supply Chain - Blockchain DApp (Academic Project)

- Built a blockchain-based agricultural supply-chain solution to ensure pricing transparency and traceability for farmers.
- Technologies: Ethereum, Solidity, Ganache, HTML, CSS, Bootstrap
- Link: swapnil7895.github.io/AgriBlockchainTrade

EDUCATION

B.E. - Information Technology | Anantrao Pawar College of Engineering and Research (SPPU)

2021 | CGPA: 9.16 / 10

Diploma - Mechanical Engineering | BV's JNIT, Pune (MSBTE)

2018

CERTIFICATIONS

- AWS Fundamentals - Amazon Web Services

ACHIEVEMENTS

- Reduced audit preparation time by 60% through large-scale Ansible automation across 100+ servers.
- 3 Spot Awards and 1 Silver Accolades Award at Eviden for high-impact Python automation delivery.
- Multiple client appreciations for reliable, high-quality automation solutions.
- Ranked among top performers during B.E. (CGPA 9.16 / 10).
